## 5.1P: In Person Check-in 2 – Answer Sheet

1. What was the most challenging aspect of the drawing tasks? Why?  
The most challenging thing about the drawing tasks is getting every class working together correctly. I spent so much time finding errors and problems, and C# even made it harder. Sometimes, they are very recognisable, but not all the time. Especially in my last task about drawing multiple shapes, I had to spend 3 days for nothing and finally fixed it for just a line thanks to my friend.
2. Review your answer to question 3 from check-in 1. Did you use any of the strategies you identified? How did they go?  
To be honest, I'm still too shy to ask the lecturer for help because of my lack of knowledge. But in a positive aspect, I did get open more that I sought help from friends who are better than me. And it has gone very well until now, so I hope it can do more and last longer.
3. What are some strategies for success you can start or continue using for the remainder of the semester?  
As I mentioned above, I will continue to seek help from everyone, especially from the lecturer and my friends. Also, I have started to learn C# by myself to improve my understanding of it. In the long run, I try to solve some problems on the internet to get better because I'm so bad at it.
