

9.1P: In Person Check-in 3 – Answer Sheet

1. What was the most challenging aspect of the case study tasks? Why?
 - For me, I have faced several problems. First of all, I have difficulty reading and understanding the requirements provided, so I make some big mistakes that take me a massive amount of time to fix. Secondly, the language C# is still challenging for a newbie like me; something new is popping up, and I have to learn it to understand it due to my lack of knowledge in this field. Finally, because of my lack of experience in using C#, it's hard for me to manage and arrange code properly to read easily or even to fix it.

2. What is the most valuable thing you have learned in this unit so far?
 - So far, I have learned much about using and adopting OOP in programming. Also, I really enjoyed the language C#, even though it's so hard that I barely got it in the beginning.

3. What are some strategies for success you can start or continue using for the remainder of the semester and in future units?
 - Life-long learning
 - Self-learning
 - Communicate more for more knowledge
